

ICAROS⁺

A future-oriented management
system for buildings

ICAROS+

A single management system for all your technical facilities

With ICAROS+ from ENGIE Fabricom, you manage all technical facilities in your building. Not only your security systems, such as fire and burglary detection, access control, technical alarms, CCTV and video content analysis (VCA), but also HVAC, parking management, PA systems and other building solutions. Our team of hardware and software specialists can integrate any solution - from any supplier, now and in the future - into ICAROS+.

ICAROS+ integrates all of the following, and more

- + Access control
- + Technical alarms
- + Camera surveillance
- + Time registration
- + Burglary detection
- + Biometric systems
- + Fire detection
- + Mobile security systems
- + Perimeter monitoring
- + Video content analysis (VCA) HVAC
- + Number plate recognition (ANPR)
- + Parking management
- + PLC's and soft-PLC
- + Public announcement systems
- + Key safes

Open system

There are many solutions that, each in their own right, handle the security and management of different aspects of a building. Finding the solution that best fits your needs is important, but it is equally crucial to integrate all of your products onto a single platform. ICAROS+ offers an answer to this concern. Thanks to this open system, all possible technologies can be integrated. This way you can quickly and effectively manage all facilities from a single place, now and in the future.

A single environment for your operator

With ICAROS+ all alarm messages are sent to a single application, so that your operator can respond quickly and effectively. Because a single environment is enough, you can limit the number of operators and related costs.

Efficient alarm handling

With ICAROS+ you can establish operational workflows for handling specific alarms. If an alarm comes in, the operator is accompanied step by step, from informing those who are present, closing or opening doors, to notifying external emergency services.

Automatic reporting

The automatic reporting of incidents shows you where you can optimise existing workflows. In this way you keep your management and security procedures constantly up-to-date.

Management and maintenance

Our operators take care of the various managerial tasks, including e.g. badges and access management. In addition, we have a team of 70 employees who handle preventive and curative maintenance tasks. These include technologists, support technicians and engineers who offer tailor-made solutions that fit your specific needs.

Main advantages

- + A single environment for managing all your building and security technologies
- + Open system into which all technologies can be integrated
- + Extensive and automated support for incident handling
- + Automatic incident reporting
